

(Breakthrough, Vol. VII, No. 4, Fall 1989)

1989 SEVENTH ANNUAL PROFESSIONAL SEMINAR - OVERVIEW

A palpable sense of expectancy accompanied the commencement of the Seventh Annual Professional Seminar as a record number of Professional Division members from the United States, Canada, Britain, and Japan convened at the TMI Center to share a heady week of inquiry, innovation, and information. Within the theme of the seminar, "Manifesting the Vision," members representing a broad spectrum of professional interests focused on the tasks of bringing vision into form through Hemi-Sync® application.

Formal presentations stressed specific methodologies which have been successful for utilizing Hemi-Sync in clinical psychology, classroom learning studies, physiological monitoring, personal development, workshop design and presentation, music therapy, and project management. The TMI lab staff provided updates on the "state of the technology" through a Brainmapping Project status report and the monitors' perspective on individual sessions in the lab's isolation booth.

The level of participation and synergy increased throughout the week as members took advantage of the opportunities for open forum and informal group discussion to establish networking and collaborative relationships. Some of the informal topics introduced were "BrainMind Machines: A Review of Neurotechnological Devices," and "Electromagnetic Field Effects of Healing: Status and Future Possibilities." Scheduled experiential sessions, such as the Hemi-Sync tape day intensive, and PERSONAL RESOURCE EXPLORATION PROGRAM (PREP) sessions, allowed the members to reconnect with the personal value of Hemi-Sync guided exercises.

The group enjoyed several evenings with Bob Monroe. One session included a presentation of his recently developed theory on the "phasing" continuum (detailed in his upcoming book, ULTIMATE JOURNEY). Nancy and Bob Monroe hosted a lovely open house for the members at their home, and another session brought members and staff together to share a tribute to Bob with the unveiling of his portrait bust.

Several special project groups were formed as members took advantage of the collaborative opportunities within this highly charged group. The areas of research and application developed were: Hemi-Sync tapes for individuals undergoing life/death transition, tapes to address specific medical issues, special Hemi-Sync frequencies to assist in the treatment of schizophrenics, the design of a multipurpose controlled sensory environment chamber, and the creation of a Hemi-Sync-supported executive training seminar.

Indicative of the creativity, humor, and skill evident throughout the week, the seminar closed on a high note as TMI welcomed special guests Swami Beyondananda and Trudy Lite to the stage. The Swami, author of the “Unbelievable Advice” humor column syndicated in more than eighteen publications, regaled the group with his “crazy wisdom,” including his recommendation of employing “speed suffering” as a way to pay off all karmic debts quickly. The Swami’s partner, Trudy Lite, performed her beautiful and moving “dances from the heart.

David Mulvey reported on all the presentations at the seminar.

These presentations can be found in the file:
